Report to BIS LITD30 on SC42 meeting held in April 2024 at Seoul

- *Srinivas Poosarla*

-

I attended SC42 meetings for the first time in person at Seoul and participated in relevant sessions where my contributions/comments were needed.

Summarizing below my inputs:

1. Attended work item on Trustworthiness (editor : Viveka from Sweden) where I volunteered to contribute. Viveka presented during the session and I emphasized the need for keeping in view both Deontological and Utilitarian ethics when the interpretation is done on what is right and wrong on AI. Also found there is improvement needed in structure of the guidance, which I will provide subsequently as expert contributor.

2. A new work item "**Artificial Intelligence — De-identification of training data for ML" was proposed by me in WG2 during the day 2 session, given the emerging privacy risks on use of publicly scraped data and data from unknown sources.** Recognizing the recommendation from WG 2, SC 42 agreed that a preliminary work item is being registered for development in WG 2. SC 42 supported the nomination of myself as Project Editor of this PWI, and requested its Committee Manager to issue a call for experts.

3. Participated in work item session on 'Reliability of Ai systems' by Anantaram

4. Attended other session in WG2, and shared my views as expert during the meeting.

5. Also attended the event conducted on day 4 where several speakers presented on AI related topics.

6. Could not attend the social event due to advance registration not done.
