Respected Madam and sir

DI ELECTRIC BOOTS

A standard for the above captioned article is important and necessary . Relevant global standard is EN 50321.

Bis does not have provision to adopt the same .

ISO standards refer to the same as base standard on date wherever requirements arise .

It is requested that the similar standard may please be framed under BIS

One such earlier move to frame useful standard for FIREMEN'S BOOT for structural fire had been aborted for reasons .

Leather upper firemen's boots do not meet requirements of structural fire .
But requirements of structural fire cover all sectors

Standard for test vide ISO 11999_6
Is adopted ignoring global prevalence of EN 15090 .

A much _ required consideration tio frame specific product standard is call of the day for Firemen's boot and Di electric boot

The matter may please be considered in practical way so as to help indenters and users as well as manufacturers to provide service to the complicated sector .

Thanking you
Yours faithfully

Basak j
