Title of the document : Measurement of Photosensitive Devices Part 3: Methods of Measurement of Photoconductive Cells for use in the Visible Spectrum (First Revision)

Document Type : Revision of Indian Standard (IS 7146 : Part 3 : 1974)

This document has following salient features which may require specific attention for your valuable comments:

IEC 60306-3:1970 outlines the requirements and specifications for the design and performance of high-voltage electrical equipment, particularly focusing on the insulation coordination for such equipment. This standard is intended to ensure the reliable operation and safety of electrical systems by establishing guidelines for the selection and application of insulation materials, as well as the coordination of insulation levels to protect against electrical stresses. It provides criteria for insulation strength, dielectric properties, and the interaction of different insulation components within electrical installations. This standard applies to equipment operating at voltages above 1 kV and serves as a reference for manufacturers, engineers, and technicians involved in the design, testing, and maintenance of high-voltage electrical systems.

Please examine the document and share your comments regarding further improvement in the document.
