Title of the document : INDUSTRIAL QUENCHING OILS DETERMINATION OF COOLING CHARACTERISTICS NICKEL-ALLOY PROBE TEST METHOD

Document Type : New Indian Standard

This document has following salient features which may require specific attention for your valuable comments:

1) *This International Standard specifies a laboratory test using a nickel-alloy probe for the determination of the cooling characteristics of industrial quenching oils. The test is conducted in non-agitated oils and thus is able to rank the cooling characteristics of the different oils under standard conditions. No correlation can be made between the results of this test and the quench rates in industrial quench installations in which varying degrees of agitation are present.*
