Document Number : TXD 32 (25492) WC

Title of the document : Textile Floor Coverings - Determination of Flame Resistance by Tablet Test

Document Type : Revision of Indian Standard (IS 12722 : 1989)

This document has following salient features which may require specific attention for your valuable comments:

1) Besides the conventional textile floor coverings manufactured from wool, silk jute, etc., these are now increasingly being manufactured utilizing blends containing man-made fibres. Their flammability depends upon the constituent fibres, exposure conditions during actual use and the nature of flame retardant treatment imparted. The importance of the standard for determining the flame resistance of floor coverings lies in ensuring safety and reliability. This standard prescribes a method for the determination of flame resistance of textile floor coverings in a horizontal position when exposed to a small source of ignition under controlled laboratory conditions.

Please examine the document and share your comments regarding further improvement in the document.
