FOREWORD

This Indian Standard (Part 2) was adopted by Bureau of Indian Standards, after the draft finalized by Siddha Sectional Committee had been approved by the Ayush Division Council.

Siddha medicine is an ancient Indian medical system that uses herbs, minerals, metals, and organic materials to treat patients based on their unique physiology, environment, and lifestyle factors, including age, gender, race, habits, and disease. For the purpose developing Siddha related guidelines, classifications, and regulations, and further integration into mainstream health systems, Standards on Siddha terminology is an essential tool.

This standard is published in four parts. The other parts in the series are:

Part 1 Standardized terminology for core concepts

Part 3 Standardized terminology for materials

Part 4 Standardized terminology for food

The series of standards will benefit Siddha medicine professionals, policymakers, health workers, service providers, researchers, Siddha medicine manufacturers and the public to use the harmonized concepts, and definitions in communications, health care services, and medical records. Scope of areas that can be covered under standards cover Structure and function, Morbidity and Diagnosis, Processes and Medicine, etc. facilitating comprehensive usage.

The inputs have been derived from the information available in the public domain in the print and electronic media *inter-alia* the WHO International Standard Terminologies on Siddha Medicine available in the National AYUSH Morbidity and Standardized Terminologies Electronic (NAMASTE) Portal, Development of Standard Siddha Terminologies, Siddha Pharmacopoeia, Siddha Formulary of India, and authoritative books of Siddha Medicine.

The composition of the Committee responsible for the formulation of this standard is given in [Annex A](#).

*Indian Standard***SIDDHA — GLOSSARY OF TERMS****PART 2 STANDARDIZED TERMINOLOGY FOR PREVENTIVE HEALTH****1 SCOPE**

This standard (Part 2) covers the description/definition of terminologies related to preventive health concepts in Siddha.

NOTE — The original terms appearing in the text have been transliterated into English and defined for the purpose of a clear understanding of the concept by any person who is not an expert in Siddha. These terms may be used by manufacturers, researchers, academicians, regulators,

clinical practitioners, and other enthusiasts interested in the science of the Siddha system of Medicine.
