FOREWORD

This Indian Standard (Second Revision) was adopted by the Bureau of Indian Standards, after the draft finalized by the Soil Quality and Fertilizers Sectional Committee had been approved by the Food and Agriculture Division Council.

Food additives are added to improve the appearance, flavour, texture or storage properties, etc of the processed foods. As certain impurities in these substances have been found to be harmful, it is necessary to have a strict quality control of these food additives. A series of standards have, therefore, been prepared to cover purity and identification of these substances. These standards would help in checking purity, which requires to be checked at the stage of manufacture, for it is extremely difficult to detect the impurity once these substances have been added to the processed foods. Besides, these standards are intended to guide the indigenous manufacturers in making their product conform to specifications that are accepted by scientists, health authorities and national/international bodies.

Use of fumaric acid as a food additive is permitted under the *Food Safety and Standards (Food Products Standards and Food Additives) Regulations, 2011*.

Chemical description

Its chemical names are *trans*-butenedioic acid and *trans*-1,2 ethylenedicarboxylic acid. Its empirical formula is $C_4H_4O_4$. Its molecular weight is 116.07. Its structural formula is given below:

This standard was first published in 1972. It was first revised in 1996 to incorporate the requirement of solubility keep in line with Food chemical codex (FCC); and the requirement of lead was replaced by heavy metals with its corresponding test method.

In this revision, one amendment issued to the previous version of the standard has been incorporated and the following major changes have been made:

- a) The requirement for heavy metals has been removed as the limit of lead (contaminant in food colours) is already covered through the standard; and
- b) The marking requirements have been updated.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'. This number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

*Indian Standard***FUMARIC ACID, FOOD GRADE — SPECIFICATION***(Second Revision)***1 SCOPE**

This standard prescribes the requirements and methods of sampling and test for fumaric acid, food grade.

2 REFERENCES

The standards given below contain provisions which through reference in this text, constitute provision of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent edition of these standards:

<i>IS No.</i>	<i>Title</i>
IS 1070 : 2023	Reagent grade water — Specification (<i>fourth revision</i>)
IS 1699 : 2024	Food colours — Methods of sampling and test (<i>third revision</i>)
IS 2362 : 1993	Determination of water by Karl Fischer method — Test method (<i>second revision</i>)
IS 5762 : 1970	Methods for determination of melting point and melting range

3 DESCRIPTION

The material may be in the form of white, odour-less granules or as a crystalline powder with a characteristic acid taste. Fumaric acid is soluble in alcohol, slightly soluble in water and ether and very slightly soluble in chloroform.

NOTE — The solubility is intended only as information regarding approximate solubility and is not to be considered as a quality requirement and is of minor significance as a means of identification or determination of purity.

4 REQUIREMENTS**4.1 Identification Tests**

Place 50 mg of fumaric acid in a test tube, add 2 mg

to 3 mg of resorcinol and 1 ml of sulphuric acid, stir, heat at 120 °C to 130 °C for 5 min and cool. Dilute with water to 5 ml and add sodium hydroxide solution (2 : 5) dropwise while cooling to make the solution alkaline. Dilute with water to 10 ml. The solution shall have a greenish blue fluorescence under ultraviolet light.

4.1.1 Melting Range

The melting range of the product when tested as per the method given in IS 5762 shall be from 286 °C to 302 °C.

4.2 The material shall also comply with the requirements given in [Table 1](#).

5 PACKING

The material shall be securely packed in well-filled containers with minimum access to light and moisture. The containers shall be such as to preclude contamination of the contents with metals or other impurities.

6 STORAGE

The material shall be stored in a cool and dry place so as to avoid excessive exposure to heat.

7 MARKING

7.1 The containers shall be securely closed and shall bear legibly and indelibly the following information:

- Name of the material including the words 'Food Grade';
- Source of manufacture;
- Net quantity when packed;
- Batch or code number;
- Date of manufacture; and
- Expiry/ Best before date; and
- Any other requirements as specified under the *Legal Metrology (Packaged Commodities) Rules, 2011* and *Food Safety*

and Standards (Labelling and Display) Regulations, 2020.

7.2 BIS Certification Marking

The product(s) conforming to the requirements of this standard may be certified as per the conformity assessment schemes under the provisions of the Bureau of Indian Standards Act, 2016 and the Rules and Regulations framed thereunder, and the products may be marked with the Standard Mark.

8 SAMPLING

Representative samples of the materials shall be

drawn according to the method prescribed in IS 1699.

9 TESTS

9.1 Tests shall be carried out by the methods specified in col (4) of [Table 1](#).

9.2 Quality of Reagents

Unless specified otherwise, pure chemicals and distilled water (*see* IS 1070) shall be employed in tests.

NOTE — 'Pure chemicals' shall mean chemicals that do not contain impurities which affect the results of analysis.

Table 1 Requirements of Fumaric Acid, Food Grade

([Clauses 4.2](#) and [9.1](#))

SI No.	Characteristic	Requirement	Method of Test, Ref to
(1)	(2)	(3)	(4)
i)	Purity (as C ₄ H ₄ O ₄) on anhydrous basis, percent by mass, <i>Min</i>	99.5	A-1
ii)	Moisture, percent by mass, <i>Max</i>	0.5	IS 2362
iii)	Sulphated ash, percent by mass, <i>Max</i>	0.1	A-2
iv)	Maleic acid, percent by mass, <i>Max</i>	0.1	A-3
v)	Arsenic (as As), mg/kg, <i>Max</i>	3	IS 1699
vi)	Lead (as Pb), mg/kg, <i>Max</i>	2	IS 1699

ANNEX A

(Table 1)

METHOD OF TEST FOR FUMARIC ACID, FOOD GRADE

A-1 PURITY**A-1.1 Procedure**

Transfer about 2 g, accurately weighed previously dried material into a 250 ml conical flask, add 50 ml of methanol and dissolve the sample by warming gently on a steam-bath. Cool, add phenolphthalein indicator and titrate with 1 N sodium hydroxide solution. Perform a blank determination and make any necessary correction. Each ml of 1 N sodium hydroxide is equivalent to 58.04 mg of fumaric acid.

A-2 SULPHATED ASH**A-2.1 Reagent****A-2.1.1 Concentrated Sulphuric Acid****A-2.2 Procedure**

Weigh accurately about 2 g of the material in a tared crucible. Ignite, gently at first until the material is thoroughly charred. Cool, moisten the residue with 1 ml sulphuric acid and ignite gently till the carbon is completely consumed. Cool the crucible in a desiccator and weigh.

NOTE — Carry out the ignition in a place protected from air currents and use as low temperature as possible to effect the combustion of carbon.

A-2.3 Calculation

Sulphated ash, percent by mass = $\frac{M_1}{M_2} \times 100$

where

M_1 = mass, in g, of the residue; and

M_2 = mass, in g, of the material taken for the test.

A-3 MALEIC ACID**A-3.1 Reagents****A-3.1.1 Buffer Solution**

Dissolve 53.5 g of ammonium chloride in about 900 ml of water, adjust the pH to 8.2 with approximately 0.3 N ammonium hydroxide and dilute with water to 1 000 ml.

A-3.1.2 Standard Solution

Transfer to a 100 ml volumetric flask about 100 mg, accurately weighed, maleic acid of the highest purity available, dissolve in about 10 ml of water, then dilute to volume with water and mix.

A-3.1.3 Sample Solution

Transfer about 50 g of the sample, accurately weighed, into a 250 ml beaker, add 80 ml of water, and stir for 10 min with a mechanical stirrer. Filter, using suction, and wash with about 40 ml of water. Transfer the combined filtrate and washings to a 250 ml beaker, add an additional 50 g sample, accurately weighed, to the beaker and repeat the stirring, filtration, and washing procedure. Transfer the combined filtrate and washings to a 250 ml volumetric flask, add 2 drops of phenolphthalein indicator, then add sodium hydroxide solution with stirring, until a light pink colour persists for at least 30 s, and dilute to volume with water.

A-3.2 Procedure

Transfer 10.0 ml of the sample solution into a 100 ml volumetric flask, add 20 ml of buffer solution, dilute to volume with water, and mix (solution A). Rinse a polarographic cell with a portion of the solution, then add a suitable volume of the solution to the cell, immerse it in a water-bath regulated at 24.5 °C to 25.5 °C and deaerate by bubbling purified nitrogen through the solution for at least 6 min. Insert the dropping mercury electrode of a suitable polarograph, and record the polarogram from –1 volt to –2 volts, using a saturated calomel electrode as the reference electrode. Determine the height of the wave occurring at the half-wave potential near –1.36 volts. In the same manner polarograph a solution prepared by adding 10 ml of the sample solution, 20 ml of the buffer solution and 2.0 ml of the standard solution to a 100 ml volumetric flask and diluting to volume with water (solution B).

A-3.3 Calculation

Calculate the mass, in mg, of maleic acid in the total

IS 6793 : 2024

mass of sample taken by the formula:

$$\frac{2\,500 \times C \times A}{(B - A)}$$

where

C = concentration, in mg/ml, of added maleic acid in solution B ;

A = wave height of solution A ; and

B = wave height of solution B .

Bureau of Indian Standards

BIS is a statutory institution established under the *Bureau of Indian Standards Act, 2016* to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Head (Publication & Sales), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the website-www.bis.gov.in or www.standardsbis.in.

This Indian Standard has been developed from Doc No.: FAD 08 (26358).
