#### **FOREWORD**

This Indian Standard (First Revision) was adopted by the Bureau of Indian Standards, after the draft finalized by the Mining Techniques and Equipment Sectional Committee had been approved by the Mechanical Engineering Division Council.

This standard was first published in 1981. This standard is being revised to keep pace with the latest technological developments and international practices. Also, in this revision, the standard has been brought into the latest style and format of Indian Standards, and references of Indian Standards, wherever applicable have been updated. BIS certification marking clause has been modified to align with the revised *Bureau of Indian Standards Act*, 2016.

This standard lays down the requirements for dog spikes (also called dog nails) used in laying of mine haulage-tracks. This standard covers two types of dog spikes: a) a chisel shaped tail (Type C) and b) a rounded tail (Type R).

Of the two, the Type C dog spikes find greater use in Indian mines. These dog spikes are easily driven into the wooden sleeper and are easier to manufacture (may be manufactured in mine workshops). In addition, their use involves lesser damage to sleepers thus increasing the life of sleepers. Due to these advantages, the use of these dog spikes is recommended at places where track layout is frequently changed, high speeds are not involved, rails used are comparatively of lighter section and haulage tracks are not permanent in nature. These dog spikes are therefore, normally used for laying tracks near working faces, at places where locomotive haulage is not used, etc.

On the other hand, the Type R dog spikes, though not in demand, are recommended for use where track is comparatively of permanent nature, high speeds of vehicles are involved, locomotives are expected to run on the tracks and rails are of heavier section. These dog spikes are, therefore, preferred at trunk haulage routes. pit-bottom and pit-top layouts, etc.

For laying the haulage track, Type C dog spikes are driven directly into the sleeper by hammering the head whereas Type R dog spikes are driven into the sleeper after drilling a blind hole in the sleeper with an auger.

The composition of the Committee responsible for the formulation of this standard is given in Annex A.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2:2022 'Rules for rounding off numerical values (*second revision*)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

### Indian Standard

## DOG SPIKES FOR MINE HAULAGE TRACKS — SPECIFICATION

(First Revision)

#### 1 SCOPE

This standard lays down the requirements for dog spikes (also called dog nails) for mine haulage and locomotive tracks.

#### 2 REFERENCES

The standard listed below contains provisions which, through reference in this text, constitute provisions of this standard. At the time of publication, the edition indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most

recent edition of this standard:

IS No. Title

IS 2062: 2011 Hot rolled medium and high tensile structural steel — Specification (seventh revision)

#### 3 TYPES

- a) *Type C* Dog spike with chisel shaped tail; and
- b) *Type R* Dog spike with rounded tail.

#### 4 DIMENSIONS

#### 4.1 Type C Dog Spikes (See Fig. 1)

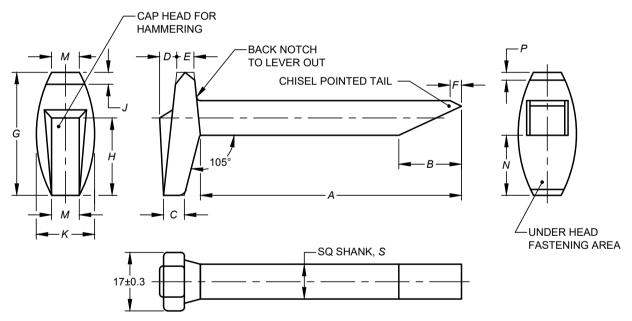

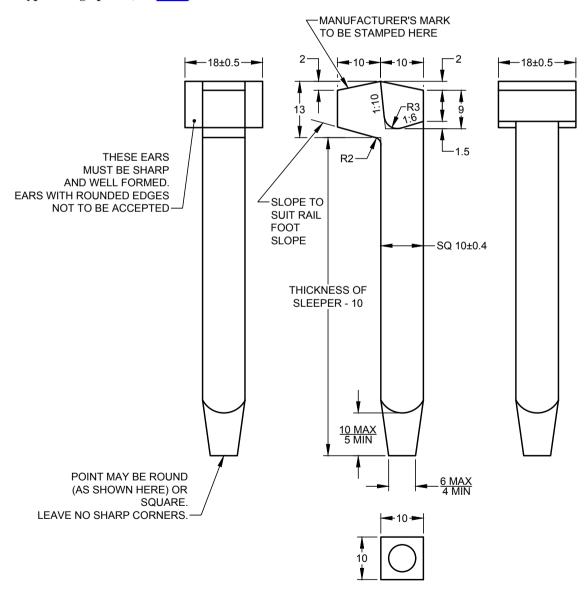

FIG. 1 TYPE C DOG SPIKES

All dimension in millimetres.

Sl No.	Nominal Size	Size of Square Shank	Length of Shank, A	В	С	D	Е	F	G ±0.5	Н	J	K	M, Min	N	P	Suitable for Rail Section kg/m

## 4.2 Type R Dog Spikes (See Fig. 2)

All dimension in millimeters.

FIG. 2 Type R Dog Spikes

#### **5 MATERIAL**

Steel used shall be conforming to IS 2062.

#### **6 DESIGNATION**

Type C dog spikes of  $12 \times 100$  nominal size conforming to this standard shall be designated as:

Dog Spike  $12 \times 100$ C IS 10046

#### 7 MARKING

Each spike shall be marked with manufacturer's

identification mark or trade-mark and nominal size.

#### 7.1 BIS Certification Marking

The product(s) conforming to the requirements of this standard may be certified as per the conformity assessment schemes under the provisions of the *Bureau of Indian Standards Act*, 2016 and the Rules and Regulations framed thereunder, and the products may be marked with the Standard Mark.

#### **Review of Indian Standards**

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the website-www.bis.gov.in or www.standardsbis.in.

This Indian Standard has been developed from Doc No.: MED 08 (20458).
