FOREWORD

This Indian Standard was adopted by Bureau of Indian Standards, after the draft finalized by Yoga Sectional Committee had been approved by the Ayush Division Council.

Yoga is the science and an art of healthy living. It is a spiritual discipline whose aim is to bring inner transformation of a human being. *Haṭha-yoga* put emphasis on the purification of the body. For purification of the body, *Haṭha-yoga* prescribes *Ṣaṭ-karma*. It is also called as *Śodhana Kriyā* which means the process for purification. These practices provide flexibility, vitality, longevity, health and mental peace to the practitioners. The purpose of these cleansing techniques is to purify the body and mind, making it fit for spiritual practices and the flow of prana (vital energy).

Dhautī is the first purification process mentioned in almost all *hatha yogic* texts specifically focuses on cleansing the digestive system. *Dhautī Kriyā* is performed using various materials and methods depending on the type of *Dhautī*. Each method requires specific guidelines and precautions to ensure safety. It should be done under the guidance of a knowledgeable instructor.

Vastra Dhautī is a yogic cleansing technique that specifically targets the esophagus, stomach, and digestive system. In *Haṭha yoga pradīpikā* classical yoga text, there is a description of *Vastra Dhautī* only but in *Gheraṇḍa saṃhitā*, *Dhautī kriyā* is explained in four ways to clean the body that is *Antra Dhautī*, *Danta Dhautī*, *Hrid Dhautī* and *Mulashodhana*. *Vastra Dhautī* comes under the category of *Hrid Dhautī*.

The term "*Vastra*" means cloth, and "*Dhautī*" means cleansing, referring to the practice of swallowing a strip of clean cloth and using it to cleanse the upper digestive tract. The cloth used in *Vastra Dhautī* is an important element of the practice, and it needs to meet specific requirements for safety. This standard has the description of *Vastra Dhautī* which is the part of *Dhautī Kriyā*.

The composition of the Committee responsible for the formulation of this standard is given in [Annex B](#).

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.
