FOREWORD

This Indian Standard (First Revision) was adopted by the Bureau of Indian Standards, after the draft finalized by the Agricultural Machinery and Equipment Sectional Committee had been approved by the Food and Agriculture Division Council.

A tree pruner is a hand tool used for removing unwanted branches/twigs of the tree for giving proper framework and aeration to the tree. Tree pruner can be used to remove the unwanted branches/twigs more conveniently with less effort and saving time. Nowadays long reach tree pruner is used to cut branches which are beyond the reach of human hand and is thus a more powerful tool for the modern gardener. The long reach tree pruner is fixed on the top of a bracket which is fixed with lightweight aluminium or fibre glass pipe, and the blade is actuated by a nylon strip/rope which returns to the original position with the help of tension spring. Height can be extended through telescopic pipe (optional) which is used for cutting of green limbs from far away branches of tree without using ladder. It can cut the branches at different angles also.

This standard was first published in 1983. The revision of this standard incorporates the following changes:

- a) Types of tree pruner are briefly explained with the help of graphical representation and dimensional figures for guidance of users;
- b) Details of long reach tree pruner has been added;
- c) Hardness, size and dimensions of tree pruner has been modified as per current manufacturing practices; and
- d) Raw material requirements of the tree pruner have been updated as per the current manufacturing practices.

The figures in the standard are given only for typical illustration and should not be considered as suggestive of any standard design.

In revision of this standard, considerable assistance has been derived from the technical information provided by Agricultural Machinery Manufacturers Association, Pune, India.

The composition of the Committee responsible for the formulation of this standard is given in [Annex B](#).

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

Indian Standard
TREE PRUNER — SPECIFICATION
(First Revision)

1 SCOPE

This standard specifies material, dimensional and other requirements for tree pruner.

2 REFERENCES

The standards listed in [Annex A](#) contain provisions which, through reference in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent edition of these standards.

3 TYPES

3.1 Tree Pruner

A simple gardening equipment used by gardner/farmer to cut unwanted branches/twigs which are in reach of the human hand. The various parts of the tree pruner are given in [Fig. 1](#) to [Fig. 7](#).

3.2 Long Reach Tree Pruner

A tree pruner used to cut branches/twigs which are beyond the reach of human hand. The various parts of the long reach tree pruner are given in [Fig. 8](#) and [Fig. 9](#).

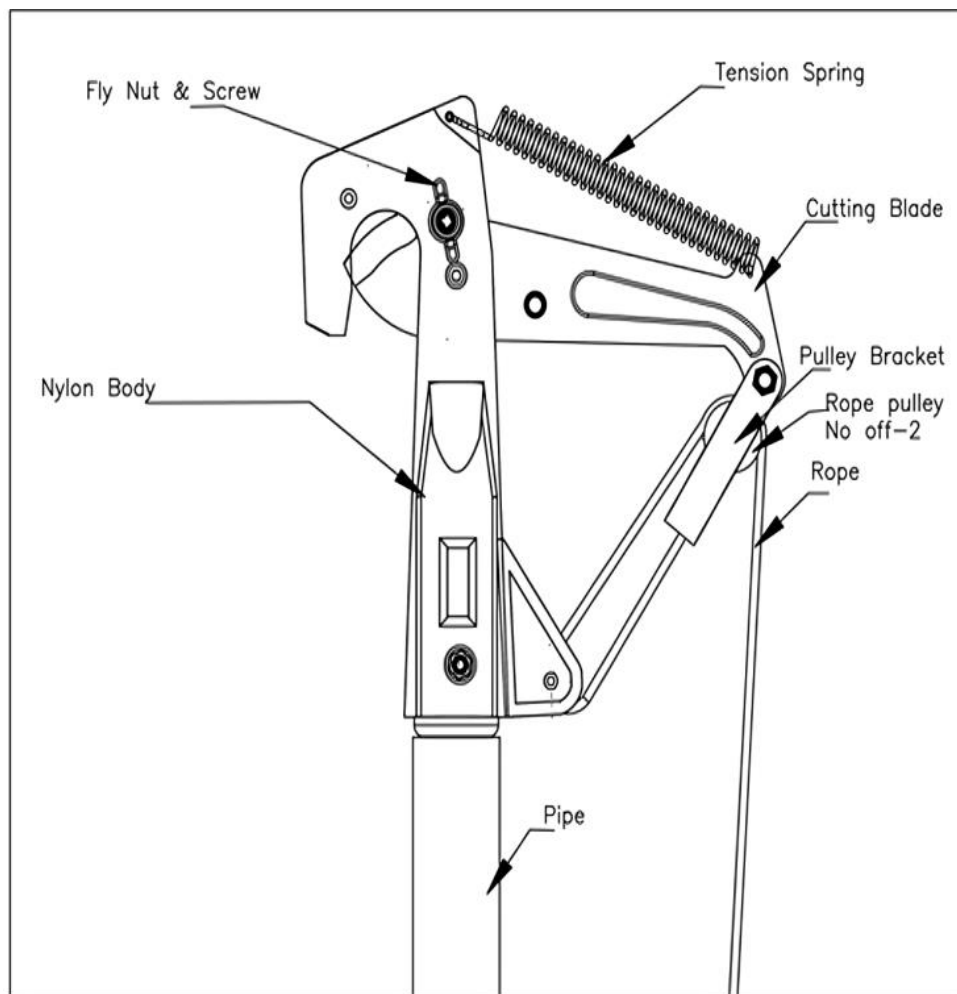

FIG. 1 TYPICAL EXAMPLE OF TREE PRUNER ASSEMBLY

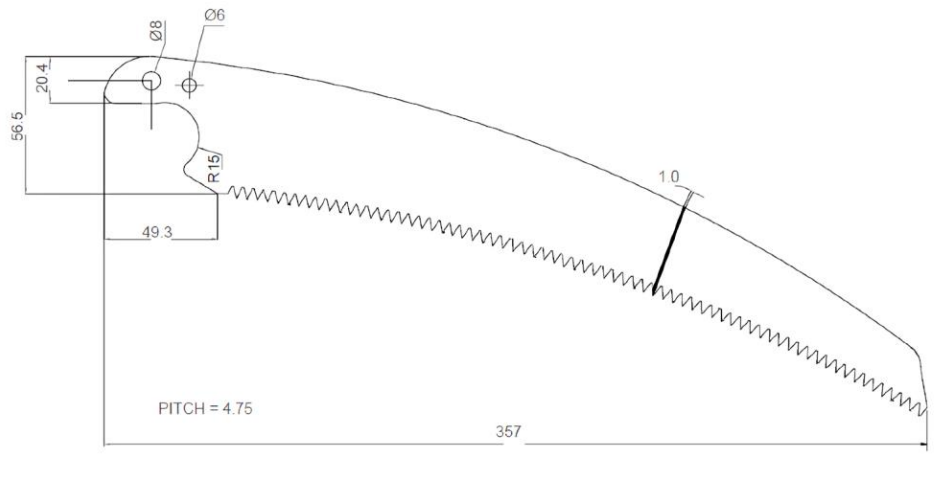

FIG. 2 TYPICAL DIMENSIONS OF CUTTING SAW FOR TREE PRUNER

(All dimensions are in mm unless stated otherwise)

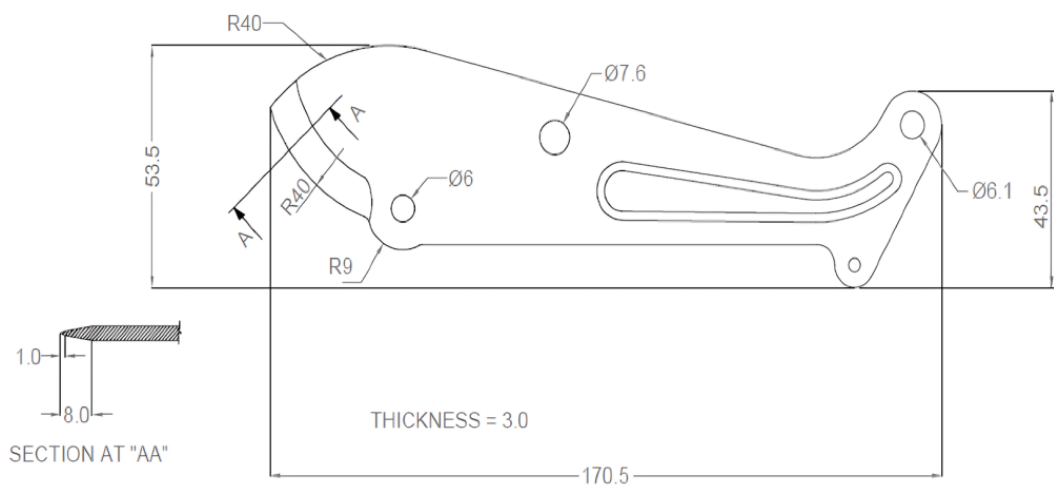

FIG. 3 TYPICAL DIMENSIONS OF CUTTING BLADE FOR TREE PRUNER

(All dimensions are in millimetres unless stated otherwise)

4 MATERIALS

4.1 Blade

The blade of the tree pruner shall be manufactured from carbon steel [see IS 1570 (Part 2/Sec 1)] or stainless steel (see IS 6911).

4.1.1 The chemical composition of the carbon steel shall be as follows:

a) Carbon — 0.7 percent to 0.9 percent;

b) Silicon — 0.1 percent to 0.4 percent;

c) Manganese — 0.5 percent to 1.0 percent;

d) Sulphur — 0.05 percent, *Max*; and

e) Phosphorus — 0.05 percent, *Max*.

Some of the examples of carbon steels that may be used are C70, C80 and C85 [see IS 1570 (Part 2/ Sec 1)].

4.1.2 The chemical composition of stainless steel (*see* IS 6911) as:

- a) Carbon — 0.26 percent to 0.4 percent;
- b) Silicon — 1.0 percent, *Max*;
- c) Manganese — 0.6 percent to 1.0 percent;
- d) Sulphur — 0.03 percent, *Max*;
- e) Phosphorus — 0.03 percent, *Max*; and
- f) Chromium — 12 percent to 14 percent.

4.2 Body Links

For body links mild steel (*see* IS 2062) should be used.

4.3 Main Body

The following material shall be used for body:

- a) Nylon 6 (*see* IS 13463); or
- b) Teak wood body with steel bracket.

4.4 Spring

Spring steel wire [*see* IS 4454 (Part 1)] should be used.

4.5 Pipe

Pipe shall be made of aluminium alloy (*see* IS 1285)

or light weight fibre glass.

4.6 Cutting Saw

The saw shall be manufactured from a suitable steel having a carbon content of not less than 0.7 percent. Suitable steels that may be used for this purpose are C70, C75, C80, C85 [*see* IS 1570 (Part 2/Sec 1)]. It should be hardened and tempered.

4.7 Rope

It shall be made of nylon (*see* IS 13643).

5 HARDNESS

The blade shall be heat-treated to have a hardness in range of 48 to 55 HRC [*see* IS 1586 (Part 1)].

6 SIZE

6.1 The size (total length) shall be declared by the manufacturer. The size shall not differ by more than ± 15 mm from the declared value.

6.2 Sizes of various types of tree pruners for guidance of the user have been provided in [Table 1](#).

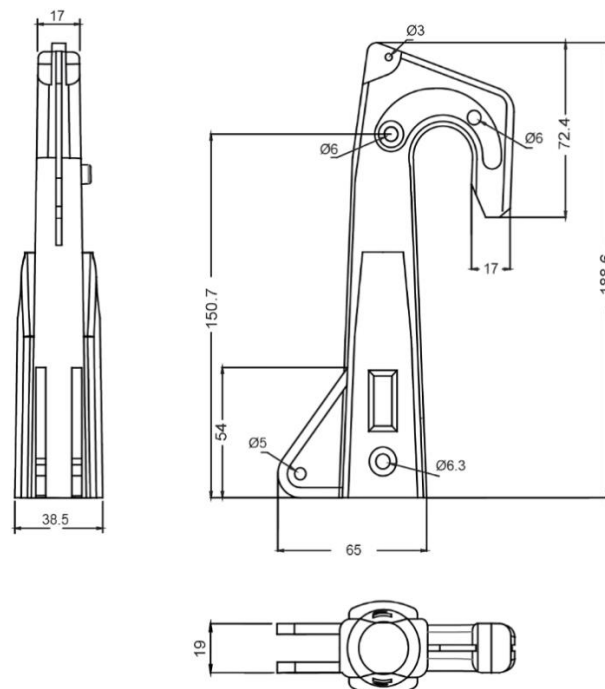

FIG. 4 TYPICAL DIMENSIONS OF BODY OF TREE PRUNER
(All dimensions are in millimetres unless stated otherwise)

7 DIMENSIONS

7.1 The dimensions of various components such as body, cutting saw and blade are given in given in Fig. 2, Fig. 3 and Fig. 4 for guidance of users. The tolerance on various dimensions, unless specified otherwise, shall be ± 5 percent.

7.2 Dimensions of aluminium and fibre glass handle (see Fig. 7) which is attached to tree pruners are given in Table 2.

7.3 The diameter of wire for tension spring shall be minimum 1.4 mm for plastic body and 1.75 mm for

wooden body. The spring shall have 25 and 27 coils respectively.

7.4 Details of long reach tree pruner are given in Fig. 8.

7.5 There shall be an operating nylon strip of 1.0 mm thick, 6.0 mm wide and of length as required for long reach tree pruner as shown in Fig. 8 and Fig. 9. The tolerance on various dimensions, unless specified otherwise, shall be ± 3 percent.

Table 1 Sizes of Various Types of Tree Pruners

(Clause 6.2)

SI No.	Type	Length, (mm)	Reference Figures
(1)	(2)	(3)	(4)
i)	Length (L1) of wooden body tree pruner without saw and handle, without top of the blade	445	see Fig. 6A
ii)	Length (L2) of wooden body tree pruner with saw, without handle	780	see Fig. 6B
iii)	Length (L3) of wooden body tree pruner without saw and handle, with top of the blade	530	see Fig. 6A
iv)	Length (L) of wooden body tree pruner with saw and handle	2 760 to 2 810	see Fig. 6B
v)	Length (L) of wooden body tree pruner without saw and with handle	2 425 to 2 475	—
vi)	Length (L) of plastic body tree pruner with saw	2 530 to 2 580	see Fig. 5A
vii)	Length (L) of plastic body tree pruner without saw	2 200 to 2 250	see Fig. 5B

Table 2 Dimension for Aluminium and Fibre Glass Handle

(Clause 7.2)

SI No.	Handle Type	Length (mm)	Diameter (mm)
(1)	(2)	(3)	(4)
i)	Aluminium pipe	2 000 to 2 050	25 to 30
ii)	Fibre glass pipe	2 000 to 2 050	26.5 to 32

FIG. 8 TYPICAL EXAMPLE OF LONG REACH TREE PRUNER ATTACHED WITH TELESCOPIC ALUMINIUM OR LIGHT WEIGHT FIBRE GLASS PIPE

(All dimensions are in millimetres unless stated otherwise)

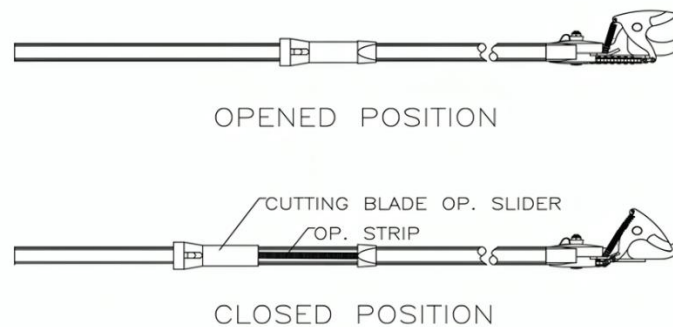

FIG. 9 TYPICAL EXAMPLE OF LONG REACH TREE PRUNER WITH CLOSED AND OPEN POSITION OF CUTTING BLADE

8 OTHER REQUIREMENTS

8.1 The blade of the pruner shall be made of sheet metal which shall be hardened and tempered. The edges are sufficiently sharpened by suitable grinding operation.

8.2 The blade shall be fitted in the body so that it can freely move when pulled with rope. The blade shall come back inside the body by the spring action.

8.3 In the closed position the cutting edge of the blade shall remain inside the body and shall not protrude.

8.4 A circular ring shall be provided for tying the rope with the pruner.

8.5 A hole shall be provided for proper fixing up of the handle with the socket of the body.

8.6 Apart from cutting blade a powerful hardened and tempered cutting saw may also be provided as per requirement of the customer to cut higher diameter of branches easily and effectively.

8.7 Long reach tree pruner is a new kind of pruner that cuts the branches easily and effortlessly. It can be extended optionally as per requirement of the

customer up to 4 m, [Fig. 9](#) shows the closed and open position of cutting blade.

8.8 Cutting capacity of the pruner should be to cut branches of diameter 10 mm to 22 mm.

9 TESTS

9.1 The pruner shall be tested by cutting not less than 20 samples of grafts, not exceeding 15 mm in diameter of citrus, guava, mango or apple suitably prepared in green condition. The cut on the bark shall be clean.

9.2 The pruner with saw attachment shall be tested by cutting not less than 6 samples of hardwood, not exceeding 25 mm in diameter.

10 WORKMANSHIP AND FINISH

10.1 The cutting surface of the blade shall be ground in a direction, preferably, at right angle to the cutting edge. The blade shall be puffed to give a fine finish. The cutting edge shall be sharp enough for immediate use. All the sharp edges, except the cutting edge shall be rounded.

10.2 The blade shall be free from cracks, seams, pits, burrs and other visual defects.

11 PACKING AND MARKING

11.1 Marking

Each tree pruner shall be marked with the following

particulars:

- a) Manufacturer's name or recognized trademark, if any;
- b) Size of pruner;
- c) Batch or code number; and
- d) Any other markings required under the *Legal Metrology (Packaged Commodities) Rules, 2011* and any other statutory requirement.

11.2 Packing

Because of highly sharp edges the exposed metallic parts shall be packed with proper thick paper or plastic sheet, such as blister type or pouch type of packing to prevent any accidental damage of the product or injury to any human being.

11.3 BIS Certification Marking

The product(s) conforming to the requirements of this standard may be certified as per the conformity assessment schemes under the provisions of the *Bureau of Indian Standards Act, 2016* and the Rules and Regulations framed thereunder, and the products may be marked with the Standard Mark.

12 SAMPLING FOR LOT ACCEPTANCE

Unless otherwise agreed to between the purchaser and the supplier, sampling of the pruner for lot acceptance shall be as per IS 7201 (Part 1).

Bureau of Indian Standards

BIS is a statutory institution established under the *Bureau of Indian Standards Act, 2016* to promote harmonious development of the activities of standardization, marking and quality certification of goods and attending to connected matters in the country.

Copyright

BIS has the copyright of all its publications. No part of these publications may be reproduced in any form without the prior permission in writing of BIS. This does not preclude the free use, in the course of implementing the standard, of necessary details, such as symbols and sizes, type or grade designations. Enquiries relating to copyright be addressed to the Head (Publication & Sales), BIS.

Review of Indian Standards

Amendments are issued to standards as the need arises on the basis of comments. Standards are also reviewed periodically; a standard along with amendments is reaffirmed when such review indicates that no changes are needed; if the review indicates that changes are needed, it is taken up for revision. Users of Indian Standards should ascertain that they are in possession of the latest amendments or edition by referring to the website-www.bis.gov.in or www.standardsbis.in.

This Indian Standard has been developed from Doc No.: FAD 11 (24864).
