Last date for Comment:

## FOREWORD

*(Formal clauses will be added later on)*

This Indian Standard (First Revision) will be adopted by Bureau of Indian Standards after the draft is finalized by the Bearings Sectional Committee and approval by the Production and General Engineering Division Council (PGDC).

This standard was first published in 2018 and has now been revised to keep up the pace with the latest technological developments and international practices.

In this revision, the following major modifications have been made:

- a) Normative references have been updated (see section 2);
- b) Added new section of design type of Adapter and Withdrawal sleeve with oil groove (see section 3.4);
- c) The symbols (see section 4) & designation (see section 5.1 and 5.2) have been adapted largely to global standards prevailing in the industry;
- d) Added new dimension Table 3 of adapter sleeve assemblies with taper 1:30 (see section 6.2);
- e) Designation have been updated in Table 1, 2 and 3 for adapter sleeves (See section 6.2) and Table 4 (see section 6.3) and 5 (see section 6.4) for withdrawal sleeves;
- f) Added new section of Material (see section 7);
- g) Added new section of dimension tolerances (see section 8.1 and 8.2);
- h) Added new section of Information on Workmanship and delivery requirement (see section 9);
- j) Added new Annexure A “Sampling and criteria for acceptance”; and
- k) Added new Annexure B “Explanatory notes” with 3D graphics.

This standard has another part, under the general title “Rolling bearings — Accessories: Part 2 Dimensions

for locknuts and locking devices”.

For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated expressing the result of a test or analysis, shall be rounded off in accordance with IS 2 : 2022 ‘Rules for rounding off numerical values (*second revision*).’ The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

## CONTENTS

### Foreword

1. Scope
  2. References
  3. Terms and definitions
    - 3.1 Adapter sleeve assembly
    - 3.2 Locking clip
    - 3.3 Locking clip assembly
    - 3.4 Design types
  4. Symbols
  5. Designation
    - 5.1 Designation of an adapter sleeve
    - 5.2 designation of a withdrawal sleeve
  6. Dimensions
    - 6.1 General
    - 6.2 Adapter sleeve assemblies with taper 1:12 & 1:30
    - 6.3 Withdrawal sleeves with taper 1:12
    - 6.4 Withdrawal sleeves with taper 1:30
  7. Material
  8. Design
    - 8.1 Tolerances for adapter sleeve
    - 8.2 Tolerances for withdrawal sleeve
  9. Workmanship and delivery requirement
    - 9.1 Visual inspection
    - 9.2 Protection against corrosion
  10. Packing
  11. Marking
    - 11.1 Packed containers marking
    - 11.2 Bis certification marking
  12. Sampling and criteria for acceptance
- ANNEX A Sampling and criteria for acceptance**  
**ANNEX B (informative) Explanatory notes**

*Draft Indian Standard*

**SPECIFICATION FOR ROLLING BEARINGS — ACCESSORIES  
PART 1 DIMENSIONS FOR ADAPTER SLEEVE ASSEMBLIES AND  
WITHDRAWAL SLEEVES**

*(First revision of IS 16605-1)*

## 1 SCOPE

This part of IS 16605 specifies:

- Boundary dimensions of adapter sleeves with taper 1:12 and 1:30 and withdrawal sleeves with tapers 1:12 and 1:30 for rolling bearings of a number of dimension series as specified in IS 5669.
- The outside diameter of suitable locknuts.
- Distance from bearing small bore face to outer face of locknut.
- From bearing small bore face to outer face of bolt head.
- Overall length of withdrawal sleeve and bearing ring.

## 2 REFERENCES

The standards given below contain provisions which, through reference in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of these standards:

<i>IS No./Other Standards</i>	<i>Title</i>
IS 919 (Part 1) : 2014	Geometrical product specifications (GPS) - ISO code system for tolerances on linear sizes: Part 1 Basis of tolerance, deviation and fits <i>(Third Revision)</i>
IS 1875: 1992	Carbon steel billets, blooms, slabs and bars for forgings — Specification <i>(Fifth Revision)</i>
IS 2399: 2024	Rolling bearings — Vocabulary <i>(Third Revision)</i>
IS 4905: 2015	Random sampling and randomization procedures <i>(First Revision)</i>
IS 5669: 2019	Rolling bearings — Radial bearings — Boundary dimensions, general plan <i>(Second Revision)</i>
IS 7008 (Part 4) : 2021	ISO metric trapezoidal screw threads: Part 4 Tolerances <i>(Third Revision)</i>
IS 14962 (Part 3) : 2022	ISO general purpose metric screw threads - Tolerances: Part 3 Limit deviations for screw threads <i>(First Revision)</i>
IS 15726: 2021	Technical product documentation — Edges of undefined shape — Indication and dimensioning <i>(First Revision)</i>

## 3 TERMS AND DEFINITIONS

For the purposes of this document, the terms and definitions given in **IS 2399** and the following apply.

### 3.1 Adapter Sleeve Assembly

assembly comprising an adapter sleeve, a locknut, and a locking device

### 3.2 Locking Clip

part in C-shape for securing a locknut

### 3.3 Locking Clip Assembly

assembly comprising a locking clip and a bolt

### 3.4 Design Types

Adapter sleeves and Withdrawal sleeves are available in various dimension series. They are slotted on one side and have a tapered casing/bearing seat of 1:12 or 1:30.

### 3.5 Adapter Sleeves

Up to a shaft diameter of about  $d_1 = 200$  mm, adapter sleeves shall preferably be used with lock washer (see Fig. 1a). Beyond this, a locking clip shall be used (see Fig. 1b). For better understanding Annex B with 3D graphics added for reference.

For easier mounting of Adapter sleeves, sleeves from  $d_1 = 140$  mm upwards can be supplied with an oil supply duct on the threaded side and an oil distributor groove in the tapered casing surface (denoted by the suffix "H") (see Fig. 1e and Fig. 2).

Sleeves from  $d_1 \geq 140$  mm upwards are also available with an additional supply duct, offset by  $90^\circ$ , and an oil distributor groove in the sleeve bore (denoted by the suffix "HB" see Fig. 3).

### 3.6 Withdrawal sleeves

Withdrawal sleeves (see Fig. 1c) are available in various dimension series. They are slotted on one side and have a tapered casing/bearing seat of 1:12 or, for the wider dimension series 40 and 41, of 1:30.

Similarly, for easier mounting and dismounting of large bearings, Withdrawal sleeves from  $d_1 = 140$  mm bore diameter are made with two oil supply ducts on the threaded side, one with access to the oil groove in the tapered casing surface, and the second with access to the bore (suffix H) (see Fig. 1d). For better understanding Annex B with 3D graphics added for reference

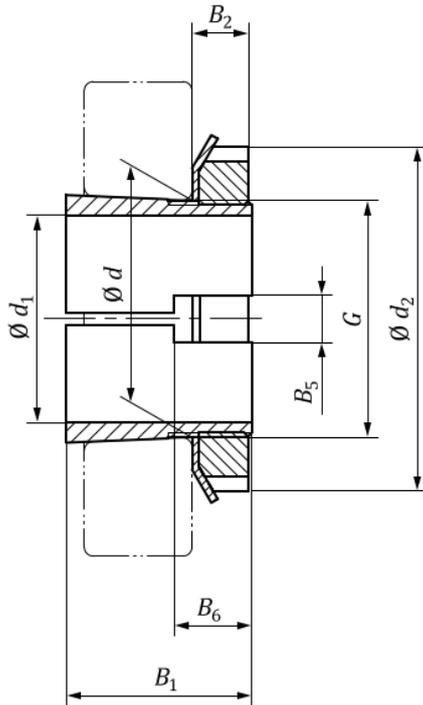

## 4 SYMBOLS

For the purposes of this document, the symbols given in ISO 15241 and the following apply.

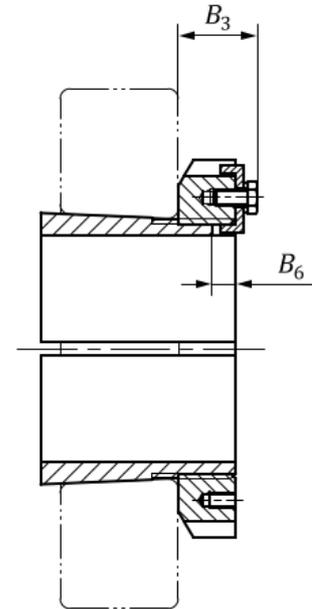

The symbols shown in Fig. 1 and the values given in Table 1, Table 2, Table 3, Table 4 and Table 5 denote nominal dimensions, unless specified otherwise.

$B_1$	adapter sleeve length or withdrawal sleeve length
$B_2$	distance from bearing small bore face to outer face of locknut
$B_3$	distance from bearing small bore face to outer face of bolt head

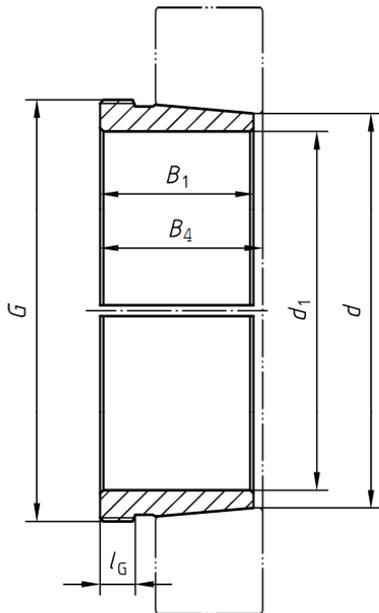

$B_4$	overall length of withdrawal sleeve and bearing ring
$B_5$	slot width (for lockwasher inner tab or locking clip)
$B_6$	slot length
$d$	bearing bore diameter
$d_1$	bore diameter of sleeve
$d_2$	outside diameter of locknut
$G$	designation of screw thread
$a$	Distance of bore for oil injection
$G_1$	Thread designation of bore(s) for oil injection
$l_G$	Thread length of withdrawal sleeve
$l_{G1}$	Thread length of bore for oil injection

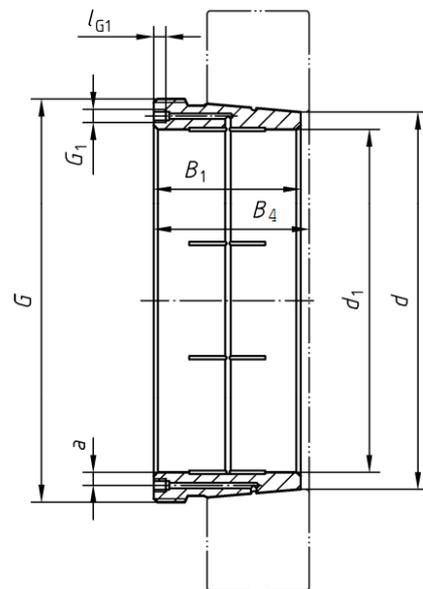

a) Dimensions of adapter sleeve with locknut and lock washer

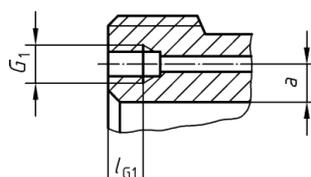

b) Dimensions of adapter sleeve with locknut and locking clip assembly

c) Dimensions of Withdrawal sleeve basic design

d) Dimensions of Withdrawal sleeve with bore for oil injection

e) Dimensions of adapter and withdrawal sleeve with bore for oil injection

FIG. 1 ADAPTER SLEEVE ASSEMBLIES AND WITHDRAWAL SLEEVE

## 5. DESIGNATION

### 5.1 Designation of an Adapter Sleeve

Designation of an adapter sleeve complete with locknut and lock washer with  $d_1 = 20$  mm bore diameter and  $B_1 = 26$  mm sleeve width (symbol H 205), without oil supply duct:

Adapter sleeve IS 16605(Part 1)- H 205

Designation of an adapter sleeve complete with locknut and lock washer with  $d_1 = 260$  mm bore diameter and  $B_1 = 195$  mm sleeve width (symbol H 3156), with an oil supply duct on the threaded side and with access to the oil groove in the tapered casing surface (suffix H see Fig. 2):

Adapter sleeve IS 16605(Part 1)- H 3156 H

Designation of an adapter sleeve complete with locknut and lock washer with  $d_1 = 260$  mm bore diameter and  $B_1 = 195$  mm sleeve width (symbol H 3156), with two oil supply ducts on the threaded side, one with access to the oil groove in the tapered casing surface, the second offset at an angle of  $90^\circ$  with access to the oil groove in the sleeve bore (suffix HB see Fig. 3):

Adapter sleeve IS 16605(Part 1) - H 3156 HB

NOTE — Suffix may be kept as per the agreement between supplier and customer.

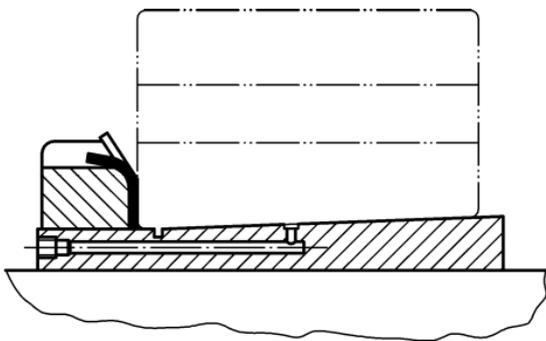

FIG. 2 ADAPTER SLEEVE WITH SUPPLY DUCT FOR OIL INJECTION; SUFFIX: H

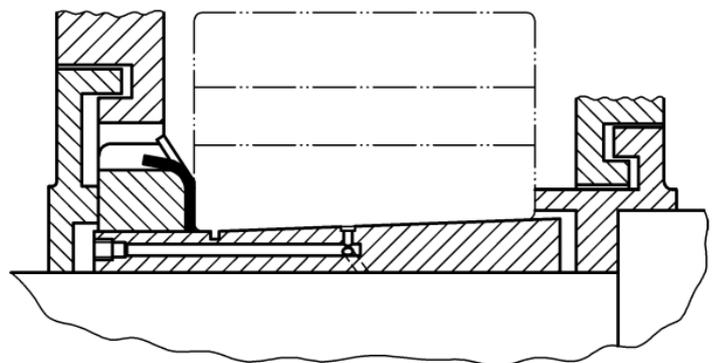

FIG. 3 ADAPTER SLEEVE WITH TWO SUPPLY DUCTS FOR OIL INJECTION; SUFFIX: HB

### 5.2 Designation of A Withdrawal Sleeve

Designation of a withdrawal sleeve with  $d_1 = 35$  mm bore diameter and  $B_1 = 25$  mm sleeve width for a bearing with  $d = 40$  mm (symbol AH 208), without oil supply duct:

Withdrawal sleeve IS 16605(Part 1) - AH 208

Designation of a withdrawal sleeve with  $d_1 = 150$  mm bore diameter and  $B_1 = 77$  mm sleeve width for a bearing with  $d = 160$  mm (symbol AH 3032), with two oil supply ducts on the threaded side (suffix H):

Withdrawal sleeve IS 16605(Part 1) - AH 3032 H

NOTE — Suffix may be kept as per the agreement between supplier and customer.

6 DIMENSIONS

6.1 General

Dimensions of adapter sleeve assemblies and boundary dimensions of withdrawal sleeves and overall lengths of withdrawal sleeve and bearing ring are given in Table 1, Table 2, Table 3, Table 4 and Table 5.

Thread lengths are not specified but shall be appropriate for securing adapter sleeve with locknut or for withdrawing a rolling bearing on the withdrawal sleeve with locknut. Dimensions of locknuts, lock washers, and locking clip assemblies for the adapter sleeves are given in IS 16605 (part 2). The locknuts are also suitable for the dismounting of the withdrawal sleeves.

6.2 Adapter Sleeve Assemblies with Taper 1:12 & 1:30

Dimensions of adapter sleeve assemblies with taper 1:12 are given in Table 1 and Table 2 and with taper 1:30 are given in Table 3. Slot lengths,  $B_6$ , are not specified but

- shall be at least long enough that lock washer or locking clip can be installed when rolling bearing, adapter sleeve, and locknut are secured onto a shaft.
- shall not be longer than 1,3 times thread lengths.

#### 6.4 Withdrawal Sleeves with Taper 1:30

Boundary dimensions of withdrawal sleeves with taper 1:30 and overall lengths of withdrawal sleeve

and bearing ring are given in Table 5.

**Table 5 Boundary Dimensions of Withdrawal Sleeves with Taper 1:30, and Overall Lengths of  
Withdrawal Sleeve and Bearing Ring**  
(Clause 4, 6.1 and 6.4)

## 7 MATERIAL

Carbon Steel with a minimum tensile strength of 430 N/mm<sup>2</sup> from bar, tube, forged or equivalent route  
Example: IS 1875 Class 2 (20C8), Class 2A (25C8), Class 3 (30C8)

## 8 DESIGN

### 8.1 Tolerances for Adapter Sleeve

The following tolerances shall apply:

- Sleeve bore diameter,  $d_1$ :
  - Tolerance zone JS9 for taper 1:12 (before making slot) acc.to IS 919 (Part 1)
  - Tolerance zone JS7 for taper 1:30 (before making slot) acc.to IS 919 (Part 1)
  
- Wall thickness variation in the area of the tapered casing surface:
  - Basic tolerance IT 6 (before making slot) acc.to IS 919 (Part 1)
  
- Sleeve width,  $B_1$ :
  - Tolerance zone h15 acc.to IS 919 (Part 1)
  
- Distance,  $B_2$  and  $B_3$ :
  - The value given in the table indicates the maximum distance.
  
- Slot width,  $B_5$ :
  - The value given in the table indicates the minimum width.
  
- Roughness of bore and of tapered casing:
  - for  $d_1 \leq 200$  mm.
    - $R_a = 2,5 \mu\text{m}$  max.
  - for  $d_1 > 200$  mm.
    - $R_a = 3,2 \mu\text{m}$  max.
  
- Threads, G:
  - Metric fine thread as in IS 14962 (Part 1), tolerance class 6H.
  - Metric trapezoidal thread as in IS 7008 (Part 4), tolerance class 7H.
  
- Outer edges of workpiece:
  - Burrs are not permitted, according to IS 15726.
  
- Locknut, Lock washer and locking clip
  - as specified in IS:16605(Part 2).

## 8.2 Tolerances for Withdrawal Sleeve

The following tolerances shall apply:

- Sleeve bore diameter,  $d_1$ :
  - Tolerance zone JS9 for taper 1:12 (before making slot) acc.to IS 919 (Part 1)
  - Tolerance zone JS7 for taper 1:30 (before making slot) acc.to IS 919 (Part 1)
  
- Wall thickness variation in the area of the tapered casing surface:
  - Basic tolerance IT 6 (before making slot) acc.to IS 919 (Part 1)
  
- Sleeve width,  $B_1$ :
  - Tolerance zone h15 acc.to IS 919 (Part 1)
  
- Roughness of bore and of tapered casing:
  - for  $d_1 \leq 200$  mm.
    - $R_a = 2,5 \mu\text{m}$  max.

- for  $d_1 > 200$  mm.
- $R_a = 3,2 \mu\text{m}$  max.

- Thread, G:
  - Metric fine thread as in IS 14962 (Part 1), tolerance class 6g.
  - Metric trapezoidal thread as in IS 7008 (Part 4), tolerance class 7e.

- Outer edges of workpiece:
  - Burrs are not permitted, according to in IS 15726.

## 9 WORKMANSHIP AND DELIVERY REQUIREMENT

### 9.1 Visual Inspection

The surfaces of the bore, outside diameter and sides shall be smooth and shall not show any damaged areas.

### 9.2 Protection Against Corrosion

The type of protection against corrosion shall be decided by the manufacturer depending on the packing material used. Under proper storage conditions, the anti-corrosive treatment shall be effective for at least 12 months in order to ensure a satisfactory functioning of the adapter and withdrawal sleeves, unless otherwise required by the purchaser.

9.2.1 For proper storage conditions, the purchaser may consult the manufacturer.

## 10 PACKING

Adapter & Withdrawal sleeves shall be packed individually, and several pieces may be packed together in suitable containers depending on the size. The packing shall be such as to protect the contents from external influences.

## 11 MARKING

### 11.1 Packed containers shall be marked with the following:

- a) Manufacturer's name or trademark;
- b) Designation of the Withdrawal or Adapter sleeves;
- c) Coded or direct indication of month and year of manufacture;
- d) Quantity; and
- e) Country of origin in English (upper case).

### 11.2 BIS Certification Marking

The product(s) conforming to the requirements of this standard may be certified as per the conformity assessment schemes under the provisions of the Bureau of Indian Standards Act, 2016 and the Rules and Regulations framed thereunder, and the products may be marked with the standard mark.

## 12 SAMPLING AND CRITERIA FOR ACCEPTANCE

Shall be as given in Annex A.

**ANNEX A**  
*(Clause 12)*

**SAMPLING AND CRITERIA FOR ACCEPTANCE**

**A-1 Scale of Sampling**

**A-1.1 Lot** — In any consignment all Withdrawal & Adapter sleeves of the same designation and manufactured under similar conditions of production shall be grouped together to constitute a lot.

**A-1.2** Withdrawal & Adapter sleeves from each lot shall be examined to ascertain its conformity to the requirements of the relevant specification.

**A-1.3** Unless otherwise agreed to between the supplier and the purchaser the number of Withdrawal & Adapter sleeves to be selected at random shall be in accordance with col 1 and 2 of Table 6. To ensure randomness, selection methods given in IS 4905 shall be followed.

**A-1.4 Number of Tests and Criteria for Conformity**

**A-1.4.1** The Withdrawal & Adapter sleeves selected according to A-1.3 shall be inspected for dimensions and tolerances, workmanship, surface finish and protection against corrosion. Any Withdrawal sleeves failing to meet requirements for any one or more of the above characteristics shall be declared as defective.

**A-1.4.1.1** The lot shall be considered conforming to the requirements of the above characteristics, if the number of Withdrawal & Adapter sleeves found defective according to A-1.3 is less than or equal to the corresponding acceptance number given under col 3 of Table 6.

**Table 6 Scale of Sampling and Criteria for Conformity**  
(Clauses A-1.3, A-1.4.1.1 and A-1.4.2)

<b>Lot Size</b>	<b>Sampling Size</b>	<b>Acceptance Number</b>	<b>Sub-sample Size</b>
(1)	(2)	(3)	(4)
Up to 50	5	0	3
51 to 160	8	0	5
161 to 300	13	0	5
301 to 500	20	0	8
501 to 1 000	32	1	13
1 001 and above	60	1	13

**A-1.4.2** If the lot is found satisfactory according to A-1.4.1.1, a number of Withdrawal & Adapter sleeves corresponding to sub-sample size given under col 4 of Table 6 shall be selected and subjected to tensile strength test.

**A-1.4.2.1** The lot shall be considered satisfactory to the requirements of the specification if none of the Withdrawal sleeves fails to meet the requirement for tensile strength.

**ANNEX B**  
(informative)  
**EXPLANATORY NOTES**

**B-1 ADAPTER SLEEVE**

- 1 - Slotted sleeve
- 2 - Lock washer
- 3 - Lock nut
- 4 - Locking clip assembly
- 5 - Tapered surface
- 6 - Thread area (G)
- 7 - Oil distributor groove
