Indian Standard
**FABRICS — DESCRIPTION OF DEFECTS —
VOCABULARY**

1 SCOPE

This International Standard describes defects which commonly appear during the inspection of woven piece-goods.

The purpose of this International Standard is to define woven-fabric defects, i.e. those characteristics that have been unintentionally introduced into the fabric. The presence of one or other of these characteristics in a fabric does not automatically imply that the fabric is sub-standard. Textile suppliers and purchasers will still have to reach agreement on whether a defect is present. If it is considered that a defect is present, they will then have to agree on the limits of the defect and on any allowance to be made, bearing in mind the intended use of the fabric.

Sections 2 to 7 of this International Standard cover the following groups of defects:

Section 2: Yarn defects in a woven fabric

Section 3: Defects in the weft direction

Section 4: Defects in the warp direction

Section 5: Defects due to, or apparent after, dyeing, printing or finishing

Section 6: Defects of, or associated with, the selvages

Section 7: General defects
