### PART 4 MATERIALS AND PACKAGING

#### 1.1 Scope

This part of ISO 6196 is intended to facilitate international communication in micrographics. It presents, in two languages, definitions of selected concepts used in micrographics and identifies relationships between the entries.

In order to facilitate their translation into other languages, the definitions are drafted so as to avoid, as far as possible, any peculiarity attached to a language.

For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this part of ISO 6196 are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.
