## ***Indian Standard***

### **SCHEDULES FOR WROUGHT STEELS**

#### **PART I STEELS SPECIFIED BY TENSILE AND/OR YIELD PROPERTIES**

##### **1. SCOPE**

**1.1** This schedule (Part -) is applicable to carbon and low alloy steels which are put into service in the hot-rolled, normalized or annealed condition in the form of plates, sections, bars, forgings and tubes, when the main criterion in the selection and inspection of the steel is either the tensile strength or the yield stress. Which is used as a basis for design. This schedule is not intended to be used as a standard,
