

SYNOPSIS OF THE INDIAN STANDARD

IS 17457:2020

Title: Sustainable Development of Habitats – Vocabulary

Doc: CED 59 (15244)

The Smart Cities Sectional Committee has taken up work of formulation of standards in the area of development of smart and sustainable cities including indicators for sustainable development of habitats, resilient cities and smart cities. Also, the Committee has taken up standards development in the field of smart transportation and allocation of parking lots, etc. These standards involve use of various terms which need to be well and uniformly understood to help proper understanding and implementation of provisions of these standards in the field. This standards has, therefore, been formulated to define various terms relating to sustainable development of habitats.

This standard is generic and is compiled to encompass the general field of sustainable development in communities, habitats and related subjects. The terms are arranged in the following subjects:

- a) Terms relating to sustainable development, resilience and smartness.
- b) Terms relating to organization, city and community.
- c) Terms relating to management.
- d) Terms relating to quality and conformity.
- e) Terms relating to indicators and metrics.
- f) Terms relating to infrastructure and services.
