SYNOPSIS OF INDIAN STANDARDS

IS/ISO 105 - E14: 1994 TEXTILES - TESTS FOR COLOUR FASTNESS - PART E14: COLOUR FASTNESS TO ACID-FELTING: MILD [Doc No.: TXD 05 (1021)] a) Scope: This Indian Standard specifies a method for determining the resistance of the colour of textiles to the action of dilute and hot mineral acids, as used under mild felting conditions in the hatmaking and felt industries. b) Salient features of content: A specimen of the textile in contact with adjacent fabrics is milled in acid solution, rinsed and dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed by comparison with the grey scales. c) Types/grades/classes, if covered in the standard: -	Number and Title of Indian Standard
This Indian Standard specifies a method for determining the resistance of the colour of textiles to the action of dilute and hot mineral acids, as used under mild felting conditions in the hat-making and felt industries. b) Salient features of content: A specimen of the textile in contact with adjacent fabrics is milled in acid solution, rinsed and dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed by comparison with the grey scales.	
to the action of dilute and hot mineral acids, as used under mild felting conditions in the hat-making and felt industries. b) Salient features of content: A specimen of the textile in contact with adjacent fabrics is milled in acid solution, rinsed and dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed by comparison with the grey scales.	a) Scope:
A specimen of the textile in contact with adjacent fabrics is milled in acid solution, rinsed and dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed by comparison with the grey scales.	to the action of dilute and hot mineral acids, as used under mild felting conditions in the hat
dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed by comparison with the grey scales.	b) Salient features of content:
c) Types/grades/classes, if covered in the standard: -	dried. The change in colour of the specimen and the staining of the adjacent fabrics are assessed
