

Indian Standard

SOAPS — DETERMINATION OF MOISTURE AND VOLATILE MATTER CONTENT — OVEN METHOD

1 SCOPE

This International Standard specifies an oven method for the determination of the moisture and volatile matter content of commercial soaps, excluding compounded products.

NOTE - Attention is drawn to ISO 4318 which specifies an azeotropic distillation method for determination of water content.

2 FIELD OF APPLICATION

This method permits the determination of water and other substances present which are removed by heating at 103 ± 2 °C.
