NATIONAL FOREWORD

(Adoption clause would be added later)

This Indian standard is identical with ISO 23319:2022 ‘Cheese and processed cheese products, caseins and caseinates — Determination of fat content — Gravimetric method’ issued by the International Organization for Standardization (ISO).

This standard was first published in 1989 as identical adoption of ISO 1735:1987 ‘Cheese and processed cheese products — Determination of fat content — Gravimetric method (Reference method)’ under dual numbering. It was revised in 2005 to align with the latest edition of ISO Standard i.e. ISO 1735 : 2004.

ISO 1735 : 2004 along with ISO 5543 : 2004 ‘Caseins and caseinates — Determination of fat content — Gravimetric method (Reference method)’ has been revised by ISO 23319 : 2022. This second revision of IS 12758 has been brought out to align it with ISO 23319 : 2022 under dual numbering system.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words ‘International Standard’ appear referring to this standard, they should be read as ‘Indian Standard’.
- b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In this adopted standard, reference appears to the following International Standard for which Indian Standard also exists. The corresponding Indian Standard which is to be substituted in its place is listed below along with its degree of equivalence for the edition indicated.

<i>International Standard</i>	<i>Corresponding Indian Standard</i>	<i>Degree of Equivalence</i>
ISO 565, Test sieves — Metal wire cloth, perforated metal plate and electroformed sheet — Nominal sizes of openings	IS 460 (Part 1) : 2020 Test Sieves — Specification Part 1 Wire Cloth Test Sieves (<i>fourth revision</i>)	Technically Equivalent to ISO 565 : 1990

The Technical Committee has reviewed the provisions of the following International Standard referred in the adopted standard and has decided that this is acceptable for use in conjunction with this standard:

<i>International Standard</i>	<i>Title</i>
ISO 3889	Milk and milk products — Specification of Mojonnier-type fat extraction flasks

In reporting the results of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 ‘Rules for rounding off numerical values (*second revision*)’.

‘FOR COMPLETE TEXT OF THE DOCUMENT, KINDLY REFER ISO 23319 : 2022.

Note: The technical content of the document has not been enclosed as these are identical with the corresponding ISO Standard. For obtaining copy of the complete ISO Standard, please contact:
