*(Adoption clause would be added later)*

This Indian standard is identical with ISO 5537 : 2023 ‘Dried milk and dried milk products — Determination of moisture content (Reference method)’ issued by the International Organization for Standardization (ISO).

This standard was first published in 1986 based on the earlier version of International Dairy Federation (IDF) Standard. Subsequently, the standard was revised in 2008 to align with the latest ISO and IDF Standards (identical) i.e. ISO 5537:2004 | IDF 26:2004 ‘Dried milk — Determination of moisture content (Reference method)’ and adopt the ISO Standard under dual numbering system. This revision has been brought out to align with the latest edition of ISO Standard i.e. ISO 5537:2023 under dual numbering system.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words ‘International Standard’ appear referring to this standard, they should be read as ‘Indian Standard’.

b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In reporting the results of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 ‘Rules for rounding off numerical values (*second revision*)’.

‘FOR COMPLETE TEXT OF THE DOCUMENT, KINDLY REFER ISO 5537 : 2023.

Note: The technical content of the document has not been enclosed as these are identical with the corresponding ISO Standard. For obtaining copy of the complete ISO Standard, please contact:
