FOREWORD

(Formal clause to be added later)

This Indian Standard was first published in 1965 and then revised in 1976 and 1999. This standard is being revised again to keep pace with the latest technological developments and international practices. In this revision, the following major changes have been made:

- 1) A reference clause has been added mentioning the latest version of all the referred standards.
- 2) Editorial corrections have been done.

Process flow diagrams are widely used in chemical industry as an aid to show basic items of major equipments and their relations to one another in the process scheme. The important flow lines are indicated as connecting items of equipments and help to describe how the process operates.

Piping and instrumentation diagrams are used in the chemical industry to indicate all important aspects such as:

- All equipment items
- All instrument items
- All pipelines
- Important aspects such as insulations, slopes, equipment elevations, etc

For the purpose of deciding whether a particular requirement of this standard is complied with the final value, observed or calculated, expressing the result of a test or analysis shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

1 SCOPE

This standard lays down symbols that are to be used while preparing process flow diagrams as well as piping and instrumentation diagrams in order to represent the major requirements of plant or units in the chemical industry.

2 SYMBOLS

2.1 The symbols indicated here represent only major items of plants. Two or more of the basic symbols may be combined to represent composite units.

2.2 Requirement of symbols has been covered in the following Sections:

| Section 01 General |
|---|
| Section 02 Process quantities |
| Section 03 Piping |
| Section 04 Valves |
| Section 05 Fittings |
| Section 06 Instruments |
| Section 07 Pumps |
| Section 08 Compressors |
| Section 09 Heating and cooling arrangements |
| Section 10 Furnaces and boilers |

Section 11 Process vessels

Section 12 Storage vessels/tanks

Section 13 Dryer Section 14 Size reduction equipment

Section 15 Separators

Section 16 Filters

Section 17 Centrifuges

Section 18 Stirrers

Section 19 Mixers

Section 20 Feeders

- Section 21 Conveyors
- Section 22 Transport vehicle
- Section 23 Miscellaneous
- Section 24 Service fluid codes
- Section 25 Insulation/tracings types

SECTION 01 GENERAL

| SYM No. | Description | Symbols | Remarks |
|---------|--------------------------|---|--|
| 0101 | Insulation or Tracing | EXAMPLES- 1) INSULATION OF A PIPELINE | Insulation or tracing for equipment and lines are generally not shown symbolically in PFD'S and P & ID'S. |
| | | 2) INSULATION OF AN EQUIPMENT | In P&IDS, the letters indicating the type of insulation or tracing are placed on top of the line with or without line number. |

SECTION 02 PROCESS QUANTITIES

| 0201 | Liquid Flow | \sum | Place numerical |
|------|--------------------------|-----------|--|
| 0202 | Gas Flow | | quantities specified within the symbol |
| 0203 | Pressure and temperature | ATA °C | within the symbol |

SECTION 03 PIPING

| 0301 | Inflow Line | | Identify by name |
|------|---------------------------------|-------------------|---|
| 0302 | Outflow Line | | Identify by name |
| 0303 | Connecting Line | | |
| 0304 | Cross Over Line | _ _}_ | |
| 0305 | Direction of Process Flow | | |
| 0306 | Slope of a Process Line | FALL | Indicates direction but not limits. Degrees are to be shown separately |
| 0307 | Dead End | | |
| 0308 | Buried Line | | |
| 0309 | Vendor Limit Line | | |
| 0310 | Tracing | | Form of heating to be indicated by initial letter |
| 0311 | Change of Pipe Specification | | |
| 0312 | Centre Line | | |
| 0313 | Coil | | |
| 0314 | Process Line | | |
| 0315 | Jacketted Line | | |
