NATIONAL FOREWORD

(Adoption clause will be added later)

This standard was first published in 2013 and was identical with ISO 6009:1992 'Hypodermic needles for single use — Colour coding for identification'. The first revision of this standard has been undertaken to align it with the latest version of ISO 6009:2016. After publication of this standard, IS 16004 : 2013/ISO 6009 : 1992 stands withdrawn.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'
- Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

Scope

This International Standard establishes a colour code for the identification of single-use hypodermic needles of designated metric size in the range of 0,18 mm (34 Gauge) to 3,4 mm (10 Gauge) . It applies to regular-walled, thin-walled, extra-thin-walled and ultra-thin walled needles, and to opaque and translucent colours.

This International Standard is not applicable to pen-needles.

The technical content of the document has not been enclosed as it is identical with the corresponding ISO standard.
For details, please refer to ISO 6009:2016 or kindly contact:
