**NATIONAL FOREWORD**

*(Formal clauses will be added later)*

This standard was originally published in 1999 as identical adoption of ISO 1675 : 1985. This revision has been undertaken to align the standard with latest version of ISO 1675 : 2022.

The major changes in this revision are as follows:

- the specification of the apparatus has been revised;
- a bibliography with references for the density of air and water has been added.

The text of ISO Standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are, however, not identical to those used in Indian Standards. Attention is particularly drawn to the following:

- a) Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'.
- b) Comma (,) has been used as a decimal marker while in Indian Standards, the current practice is to use a point (.) as the decimal marker.

In reporting the result of a test or analysis made in accordance with this standard, if the final value, observed or calculated, is to be rounded off, it shall be done in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'.

**NOTE** — The technical content of this document has not been enclosed as this is identical with the corresponding ISO Standard. For details, please refer to ISO 1675 : 2022 or kindly contact:
