Draft Indian Standard

**Belt drives — Pulleys — Limiting values for
adjustment of centres**

(First Revision of IS 15146)

ICS 21.220.10

Conveyor Belts Sectional Committee, PGD 40

Last Date for Comments: **04-08-2024**

NATIONAL FOREWORD

(Formal clauses will be added later on)

This Standard specifies the limiting values for the adjustment of centres of two transmission pulleys.

This Indian standard was first published in 2002. This first revision has been brought out to keep pace with the latest version of ISO 155.

In this revision curvilinear sections to [Table 6](#) have been added.

The text of ISO standard has been approved as suitable for publication as an Indian Standard without deviations. Certain conventions are however not identical to those used in Indian Standards. Attention is particularly drawn to the following

- Wherever the words 'International Standard' appear referring to this standard, they should be read as 'Indian Standard'.
- Comma (,) has been used as a decimal marker while in Indian Standards, the current-practice is to use a point (.) as the decimal marker.

For the purpose of deciding whether a particular requirement of this standard is complied with the final value, observed or calculated, expressing the result of a test or analysis shall be rounded off in accordance with IS 2 : 2022 'Rules for rounding off numerical values (*second revision*)'.

NOTE: The technical content of draft standard is not available on website. For details, please refer to ISO 155 : 2019 or contact:
