

IS 2721:2003 Galvanized Steel Chain Link Fence Fabric-Specification

Galvanized steel chain link fence fabric is a widely used fencing material known for its strength and durability. The fabric is made from high-quality galvanized steel wire, providing corrosion resistance and durability. It consists of interconnected wire mesh that creates a diamond pattern, providing an effective and versatile fencing solution, offering a combination of security, visibility, and durability.

Commonly used for residential, commercial, and industrial fencing, it is ideal for enclosing properties, playgrounds, and sports fields.

IS 2721:2003 outlines various mesh sizes, wire diameters, and height options for the chain link fabric to accommodate different fencing needs. Instructions for weaving of the wire into a chain link pattern, ensuring uniformity and strength in the finished product are also provided.
