

IS 17635: 2022 – Beds — Specification

IS 17635: 2022 provides specifications for **beds** used for **domestic and non-domestic purposes**, covering entirely manufactured or fabricated units as well as ready-to-assemble beds. This standard ensures that beds meet certain performance and safety criteria, suitable for adult use.

Consumers look for beds that offer comfort, durability, and safety. They expect beds to have a sturdy construction that can withstand regular use without degradation, provide **adequate** support for the mattress, and maintain **structural integrity** over time.

The standard addresses consumer needs by specifying requirements for the materials, design, and construction of beds. It includes tests for **stability, strength, and durability** to ensure that beds can support the intended load without failing. Safety features are emphasized to prevent accidents, such as ensuring that there are no sharp edges or harmful materials. Beds are also tested for **resistance to fatigue** from repeated use and assessed for their ability to hold up under various environmental conditions.
