

IS 5557 (Part 2): 2018 All Rubber Gum Boots and Ankle Boots

Indian Standard IS 5557 (Part 2) covers All Rubber Gum Boots and Ankle Boots designed for occupational use. These boots protect your feet, ankles, and legs from water, mud, and chemicals, keeping you safe and comfortable in various environments like tanneries, food and beverage industries, sewage treatment plants, petrochemical industries, pharmaceutical industries, garbage disposal, municipal operations, cement and construction work, road building, horticulture, agriculture in cold areas, petrol pumps, and other oily areas.

The need for this standard ensures that the boots meet consistent safety, durability, and performance criteria. It specifies the quality of raw materials, construction methods, and rigorous testing procedures, ensuring the boots are reliable and long-lasting.

Choosing standardized boots like those under IS 5557 (Part 2) guarantees that you are getting a product that has been tested for quality and safety. This means better protection, durability, and overall performance compared to non-standardized products. Standardized boots provide assurance and peace of mind that your feet are well-protected in demanding environments.
