

IS 5676: 1995 Moulded Solid Rubber Soles and Heels

Indian Standard IS 5676 covers Moulded Solid Rubber Soles and Heels used for heavy-duty footwear with leather or rubber uppers. These soles and heels are designed to provide durability and comfort in demanding environments.

The standard ensures consistent quality by specifying requirements for raw materials, manufacturing processes, and rigorous testing methods. This includes tests for thickness, hardness, tensile strength, and flexibility to ensure the soles and heels meet high-performance standards.

Choosing standardized products like those under IS 5676 guarantees that you are getting a product that has been tested for quality and safety. This means better protection, durability, and overall performance compared to non-standardized products. Standardized soles and heels provide assurance and peace of mind that your footwear is well-protected in demanding environments.
