

Transform Your Home with Safe, High-Quality IS 133:2023 Interior Enamel Paint

Interior enamel paint, as specified in Indian Standard IS 133:2023 is designed for use in interior spaces and serves two main purposes: **undercoating (base layer)** and **finishing (top layer)**. The paint is formulated to provide a smooth, durable, and aesthetically pleasing finish while ensuring safety and quality.

The interior enamel paint under IS 133:2023 ensures **consumer safety** with a **lead content** limit of 90 ppm to prevent health risks, especially for children. It delivers a smooth, durable finish that resists yellowing and can be applied with a **brush or spray**, easily mixing with thinners. **Quick drying** is prioritized, with surface drying in 2-4 hours and **complete hardness** within 8-12 hours, making it convenient for users. The paint offers high opacity, ensuring effective coverage with fewer coats.

To maintain **transparency and safety**, packaging includes **clear labels** indicating lead content, batch numbers, manufacturing date, and safety warnings. By adhering to these standards, the product meets consumer expectations for safety, performance, and quality.

This interior enamel paint conforming to **IS 133:2023** is a great choice for **modern homes** because it is safe, performs well, and has a **flawless finish**, ensuring your home is both beautiful and safe. Whether you're a professional or doing it yourself, this paint will make your space look great and last a long time. Choose this paint for quality, safety, and durability.
