

## IS 3097:2006, Veneered particle boards- Specification

**The Indian Standard, IS 3097:2006, Veneered particle boards- Specification** outlines the technical requirements for veneered particle boards used buildings, furniture, automobile and bus body construction, sports goods, packing cases, etc. It specifies material properties, dimensions, and quality standards for particle boards with a veneer surface, ensuring their durability and usability in different environments.

This standard provides a comprehensive framework for manufacturers and users of veneered particle boards to ensure **high quality** and **durability** in their products by testing for density, moisture content, water absorption and resistance, swelling in water, adhesion of piles, MOR, MOE, long time loading.

The veneered particle boards shall conform to the specific requirements given for **ECO-Mark** under clauses 10 of the standard.

Next time you purchase **Veneered particle boards**, look for the **BIS mark** to ensure they meet these standards, giving you peace of mind for the durability and safety of veneered particle board to use for different applications.
