

## IS 17861 : 2022 Textile Boots With Polymeric Sole ( Jungle Boots ) – Specification

Textile boots with polymeric soles, also known as jungle boots, are mainly used by police, paramilitary forces, security agencies, and trekkers during their operations. Designed for durability and comfort, these boots are built to withstand long periods of strenuous work and walking in demanding conditions. The standard sets additional requirements to meet the specific needs of armed forces personnel and address the potential risks they may encounter in their work environments. It ensures that the boots are ergonomically designed, provide comfort and protection, while also focusing on safety. The materials used in these boots must be free from toxic and hazardous chemicals, ensuring they are safe for long-term use. By meeting these standards, jungle boots are equipped to handle extreme conditions, providing the necessary support, durability, and safety for individuals working in high-risk situations.
