BROMADIOLONE CB - SPECIFICATION

SUMMERY

Bromadiolone CB (bait concentrate) is a potent rodenticide used in the preparation of rodent baits and is generally composed of 0.25 percent (m/m) bromadiolone technical mixed with diluents like talc.

The Indian Standard IS 12913:1990 specifies the requirements and test methods for bromadiolone CB to ensure its quality and potency. These include requirements for composition, physical properties, sieving requirements, and bromadiolone content by percent (m/m) in the bait concentrate. The bromadiolone technical used in the bait concentrate formulation shall conform to IS 12914.

This standard is crucial for manufacturers, pest control professionals, and regulatory authorities to ensure effective use of bromadiolone CB, protecting public health and the environment.
